

Net Disabler v1.1

[Sordum Team](#) | [April 8, 2021](#) | [112 Comments](#)

On average, teens spend nine hours a day using media for entertainment – that’s more time than they spend sleeping and far more time than they spend studying. This is why more and more families are looking into ways to **block internet access temporarily**. But as we all know, it can be hard to give up things that are bad for us, we get home from work but continue to check email, waste time on social networking sites, or stare blankly at a computer for such reason **We may want to turn the internet off** temporarily.

What is New (Thursday, April 8, 2021)

- 1.[ADDED] – Language Support
 - 2.[ADDED] – Block with Proxy feature
 - 3.[ADDED] – Enable or Disable Internet via System Tray Icon
 - 4.[ADDED] – Enable / Disable Internet Buttons
 - 5.[ADDED] – Checkbox icons
 - 6.[ADDED] – Open Internet, Hide window on startup and hide when minimized options
 - 7.[FIXED] – GUI letters are too small
 - 8.[FIXED] – It is difficult to remove each box individually when we want to unblock Internet
- (In this version You can remove the internet ban without removing the

ticks in the boxes)

9.[ADDED] – Some code improvements

The reasons to **Completely Disable Internet** are varied and many , for example :

1. To prevent programs from calling home or from updating.
2. To prevent your computer from receiving email or social media alerts etc. you could also use it to avoid distractions during work.
3. Disconnecting from the internet can limit the impact of the malware it is a security technique known as an “air gap”. By separating the computer from any network makes it more secure.
4. Internet access can be harmful if employees spend too much time browsing the Internet instead of performing their regular duties...

Technically, **you can control internet** by running netsh interface command in command prompt window to enable and disable the network connection that has the internet access. But This method can be easily circumvented and does not offer a guarantee. If you want to disable Internet connectivity for some time or on some events, you can easily do it with **Net Disabler** it is a **small portable Freeware tool**, you can use it to **quickly turn the Internet off or on again**.

The application **displays the current status of the Internet connection** in the interface above is on status and below is off

Usage is very simple, there are **4 Internet blocking methods** you can choose one/all of them or you can use a combination.

1. Disable Network Adapter
2. Block with DNS
3. Block with Windows firewall
4. Block with Proxy

After selecting use **Disable Internet** button to complete the Operation, to bring the Internet back just use **Enable Internet** button. Under menu button you can choose your **Network Adapters**, you can set a **password**, open Device Manager, Network Connections or Firewall settings

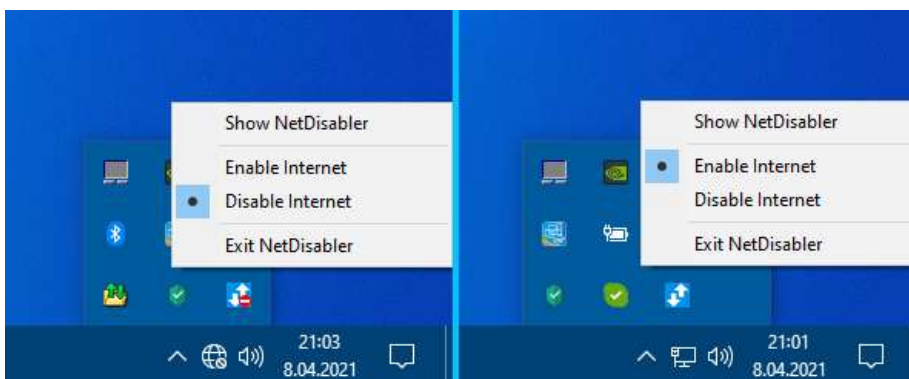

NOTE: If one of the devices is disabled , the status indicator will be off

If you are looking for **a tool that allows you to quickly cut off the Internet connection**, then “Net Disabler” is offering exactly what you are looking for.

- NetDisabler does not install any service
- NetDisabler Offer 4 Internet blocking methods
- NetDisabler has a password protection feature
- NetDisabler is Portable and freeware Application

To **enable or disable internet via taskbar** , right click on the Net Disabler taskbar icon and choose appropriate option.

Hi, DNS blocking method works fine on our computers ,
You can see this if you test it on a different computer. we
have noted down your requests, thank you

Sopandi Akbar | April 23, 2024

hi, sordum team,

1. I would like to inform you that the block method with dns no longer works in Windows 11 Home Single Language ver.23H2 (build 22631.3374), can you fix it?
2. can you add another block method like:
 - a. toggle enable disable wlan or lan service
 - b. Add network permission filter to DenyAll
 - c. Activate airplane mode and hide the configuration icon,
 - d. Disallow Wifi or Disable Wifi and hide the configuration icon
3. Can you add a "repair network" feature as an alternative if we experience network problems.
Thank you very much.

AEM | January 10, 2024

Thank you for the great software that you provide.

I understand this software works on single PCs, is there a way you can modify it to include blocking on the router

level for other connect wired and wireless connections?

Can | December 25, 2023

NetDisabler.ini
find:
HideWindowOnStartup=0
HideWhenMinimized=0
replace
HideWindowOnStartup=1
HideWhenMinimized=1

Thanks..

Sordum Team | November 6, 2023

Hi , The program has parameter support. With scheduled tasks you can run the program at any time with the relevant parameters.
Nevertheless, We have noted down your request.

jarminius | November 6, 2023

Thanks for your great software! Is there a way for you to implement an automatic timer feature? For example, internet disable between the hours of 9 PM – 9 AM. ie. So it does not have to be enabled manually? Looking to disable usage for kids

Sordum Team | October 23, 2023

Hi, The Net Disabler password setting can have a maximum of 32 characters.
We have noted down your request, Thanks

Jonhsson | October 23, 2023

Is there a way to extend the password character limit? Too short to dissuade me from entering it.

Otherwise, great tool for an ADHDer

smayer97 | October 13, 2023

I believe the previous commenter meant where you can shut it down for 120 mins, or turn it on for 4 hours, on demand.

You cannot do that with the Task Scheduler.

Please consider this.

Sordum Team | September 27, 2023

The Net Disabler program has Cmd parameter support. With the task scheduler you can create tasks that execute the corresponding commands at any time.
